SUMMARY

Business automation builder with 4 years in enterprise outbound, using LLMs, APIs and n8n to replace manual research, enrichment, personalization and sending. Built these workflows inside the outbound function at MapmyIndia, where the pipeline they supported contributed to **₹18 Cr+ in closed revenue**, and extended them for clients at Clospect. Builds with structured LLM outputs, job queues, retries and error handling, and uses Claude Code to ship internal tools from written requirements.

EXPERIENCE

Lead Generation Executive, MapmyIndia (CE Info Systems) – New Delhi July 2022 – Present

- Automated account research, enrichment, personalization and sending with n8n, Apify and LLMs inside an enterprise outbound function
- Turned a one-person outbound function into a documented, repeatable process (research, ICP qualification, sequences, daily scorecard) and **trained 2 SDRs** who now run it
- Ran account-based outbound as the sole pipeline source for a 10+ person enterprise sales team, sourcing **90+ opportunities** that contributed to **₹18 Cr+ in closed revenue**
- Generated **10 to 15 SQLs a month** across six verticals, including HDFC Bank, Tata Consumer Products, Paytm, Cars24, DLF and Apollo
- Multi-threaded **100+ target accounts a month** by mapping buying committees and sequencing them over email, LinkedIn and calls
- Built trigger-based plays around regulation and seasonal demand, and industry plays across 10+ verticals, each tied to one use case and one reason to buy
- Worked with senior leadership in ongoing reviews to set target segments, use cases, positioning and campaign messaging
- Launched outbound for a new indoor navigation product from zero: account database, ICP and buyer roles for hospitals, airports and real estate

Technologies: *Smartlead, Apollo, LinkedIn Sales Navigator, Lusha, n8n, Apify, Gemini, ChatGPT*

Founder, Clospect – Remote Jan 2026 – Present

- Built automated enrichment, ICP scoring, signal detection and sending workflows for B2B SaaS and recruitment clients
- Designed a pipeline with Apify, Gemini, Clearout and Airtable that scores prospects and routes only qualified ones into Smartlead sequences
- Built a workflow that spots expanding teams in LinkedIn job postings and uses an LLM to draft the opener
- Output of these workflows for a recruitment client: **3,200 emails into 10 qualified leads and 5 closed deals** in month one, repeated in month two
- Configured SPF, DKIM, DMARC, secondary domains and warm-up, holding **bounce rates under 1%**

Technologies: *n8n, Zapier, Apify, Gemini, Clearout, Airtable, Smartlead, Instantly*

PROJECTS

GTM Validation Tool – lead qualification web app | github.com/jithujsam-cloud 2026

- Built a web app that imports CSV lead lists, scores ICP fit with LLM structured outputs and a written reason per verdict, and verifies emails through the Clearout API
- Designed a PostgreSQL job queue with leases, retries, error handling and rate-limit auto-pause, so runs resume without processing a lead twice
- Logged every API call with tokens, latency and cost, and added per-user authentication and data isolation

Technologies: *Next.js, TypeScript, Supabase, PostgreSQL, Gemini, OpenAI, Clearout*

Outbound Workflows in n8n – signal-to-sequence automation | github.com/jithujsam-cloud 2025 – 2026

- Built a hiring-signal pipeline where Apify pulls job postings by industry and role and Gemini returns a structured hiring analysis and opener for each account
- Rebuilt Clay-style waterfall enrichment in n8n, gating paid email verification behind ICP and email-quality scoring and upserting only verified, ICP-fit contacts into Airtable
- Built a sender that rewrites each email with Claude, sends on a randomized schedule within business hours, and tracks opens through a self-hosted webhook

Technologies: *n8n, Apify, Gemini, Claude, Clearout, Airtable, Gmail, webhooks*

Klaroh – client reporting for cold-email agencies, in private beta | klaroh.online 2026

- Built a multi-tenant reporting platform that syncs campaigns, replies and mailbox health from the Instantly API and gives each agency client a no-login report, withholding any metric it cannot verify
- Wrote the product requirements and directed Claude Code to implement them, reviewing every change across **130+ pull requests and 230 tests** over 4 months
- Designed workspaces with roles, row-level security, encrypted API credentials and scheduled sync, and fixed a database read-access leak found in a security audit

Technologies: *Next.js, TypeScript, Supabase, PostgreSQL, Instantly API, Vercel, Claude Code*

SKILLS

Workflow Orchestration: n8n (self-hosted), Zapier, Clay, webhooks, scheduled triggers, Apify

LLM Workflows: Claude, OpenAI, Gemini, structured outputs, prompt engineering, LLM-assisted research, scoring and personalization, Claude Code

Integrations and Data: REST APIs, rate limiting, retries and error handling, PostgreSQL, Supabase, Airtable, Clearout, Instantly API, data hygiene

Internal Tools: Next.js, TypeScript, Vercel, row-level security, job queues

Business Systems: Smartlead, Instantly, Apollo, LinkedIn Sales Navigator, Lusha, NeverBounce

Email Infrastructure: SPF, DKIM, DMARC, domain rotation, inbox warm-up

EDUCATION

Bachelor of Business Administration, New Delhi Institution of Management – New Delhi 2022
